Lecture 1

Everything you want you will find here (:

دعاء قبل المذاكرة

اللهم إني أسألك فهم النبيين
وحفظ المرسلين والملائكة
المقربين، اللهم اجعل
ألسنتنا عامرة بذكرك وقلوبنا
بخشيتك وأسرارنا بطاعتك
إنك على كل شيء قدير
وحسبنا اللّٰه ونعم الوكيل.

فكرة سريعة عن المحاضرة

DO YOU KNOW WHY?

- If 10 people are given antibiotics for an infection,
  why are only 8 get cured?

- If 6 people are exposed to measles,
  why do only three develop the disease?

this lecture will tell us why !

اهم المصطلحات

Spirituality	الروحانية
Religiosity	التدين
Coping skills	مهارات التكيف
Quality of life	جودة الحياة
Self-esteem	تقدير الذات
Social class	الطبقة الاجتماعية
Social Structure	البنية الاجتماعية (الإعلام، الحكومة، التعليم)

ترجمة الكلمات تساعدك
اثناء المذاكرة والاختبار :)

THE BIO-PSYCHO-SOCIAL-SPIRITUAL MODEL OF HEALTH

There are 2 Models of Health and Illness :

1- The Medical Model.
2- The Bio-Psycho-Social-Spiritual (BPSS) Model.

Medical Model	Bio-Psycho-Social-Spiritual Model
1. Caused by **biological** factors 2. Specific and universal 3. Defined and treated medically	1. Caused by **multiple** factors 2. Produce multiple effects 3. Mind and body can't be separated in matters of health and illness

1-The Medical Model :

- **Caused by biological factors :**
  1. Illness has **unique** etiology or cause.
     (e.g. Polio, HIV, Tuberculosis each unique micro-organism)
  2. Reduced to a **single** physical cause.
  3. Doesn`t ask why individuals respond in different ways to same factors.

- **Specific and universal :**
  1. Each illness has **specific** features recognizable through clear, objective measures
  2. Universal: manifests itself the **same way** across time, people and cultures

- **Defined and treated medically :**
  1. Definition
  2. Diagnosis
  3. Treatment
  4. Scientific matters
  5. Unaffected by moral and subjective judgments

2- The Bio-Psycho-Social-Spiritual Model :

1. Biological factors (genes, viruses, toxins..)

Considered important (but not always sufficient)

2. Psychological factors :

- Psychology :

- Important in understanding etiology of disease
- Has a role in treatment of disease
- Interplay between mind and body in illness

- **Psychological** factors have influence on **physiological** processes:
  - Anxiety and stress affect blood pressure
  - Stress affects the immune system

- **Psychological** factors influence **physical** health through behaviors :
  - Stressed person is more likely to smoke and eat unhealthy
  - Certain personality more likely to exercise and eat healthy

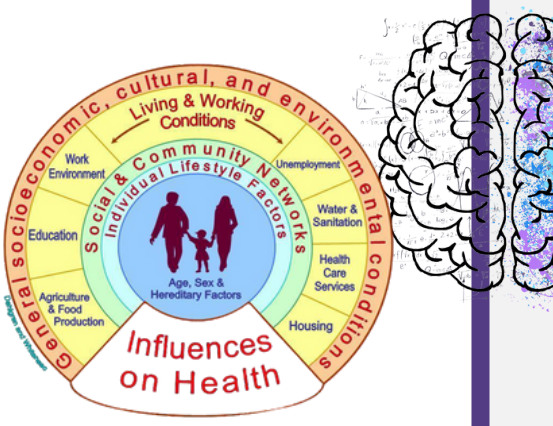
- **Physical** health status may influence **psychological** status :
  - Person with terminal cancer may get depressed
  - Person with chronic pain may become stressed and worried

3. Social context :

1. Humans function within **family, social, cultural and structures**.
2. Must understand health and illness within those contexts.
3. These factors may affect health and illness.

Sociological Components: ⚠️

- **Family** : Parents, children, extended family.
- **Social Class** : Income, education, occupation.
- **Culture** : Values, beliefs, norms, traditions.
- **Structure** : The way society is organized (media, health, government, education).

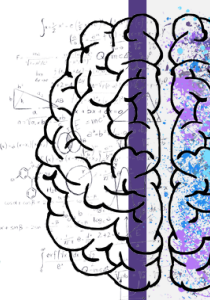


4. Spiritual context : ⚠️

- **Spirituality:**
  Personal connection with a power greater than oneself (In Islam Allah).
- **Religiosity:**
  How religious a person is in terms of beliefs and practice.
- Religiosity and Spirituality :
  1. should be included to understand health and illness.
  2. have an impact upon physical and mental health.
  3. can enhance coping and quality of life during illness.
- Religious values, beliefs, and practices impact upon the medical encounter.

Case Study

Ahmad is a **52 year old male**. For the past few months, Ahmad's wife Salma has been trying to get him to see the doctor for a check up, but he has **refused**.
For breakfast, he usually eats fried eggs with toast spread with **a lot of butter**. After breakfast he lights up a **cigarette**, dreading another day at the office. He works as an engineer for a multinational company. He **dislikes** his work and his boss. Ahmad often becomes **angry** due to the situation at work. But he also **feared losing his job** and not being able to find another one due to his older age. He has **limited physical activity**. Both **his father and brother** died of heart attack in their early sixties. Although, he believes in Allah, he often **misses his prayers** and doesn't really consider himself to be a very religious person.



1- What are the bio-psycho-social-spiritual factors in this case?
list them according to category (Biological, Psychological, Social and Spiritual).

2- How might Ahmad's psychological condition influence his risk of heart disease?

3- Would it be important to address the psychological, social, and spiritual factors in the treatment of Ahmad's condition?

Models of Health and Illness

The Medical Model
- **Biological** factors
- Specific and universal
- Treated medically

The Bio-Psycho-Social-Spiritual Model
- Multiple factors
- Multiple effects
- Mind and body cannot be separated

Interplay between mind and body in illness

- **Terminal cancer** may cause depression
- **Chronic pain** may cause stress

Psychological factors ⇄ **Physical health**

- **Stressed person** may smoke and eat unhealthy
- **Anxiety and stress** affect blood pressure
- **Stress** affects the immune system
